PROJECT INFORMATION

PROJECT INFORMATION

1.0 INTRODUCTION

Bids from contractors for qualification are invited for a project **CONSTRUCTION OF MAJOR BRIDGES ON ANKLESHWAR-RAJPIPLA ROAD (SH-64) UNDER HIGH SPEED CORRIDOR SCHEME (PHASE-1) DIST .BHARUCH IN THE STATE OF GUJARAT (W.S. (1) MAJOR BRIDGE NEAR UCHHALI AT CH 06+785 RHS (2) MAJOR BRIDGES ON KAVERI RIVER AT CH 14+720 LHS (3) MAJOR BRIDGE NEAR RANIPOR AT CH 23+180 LHS & RHS (4) MAJOR BRIDGE NEAR RAJPARDI AT CH 30+490 RHS.** The details of contract sub-section together with its estimated costs are given in Para 4.0

A general contractor, who wishes to bid for this contract, should apply for qualification in the manner set out in this document. The other tender documents will be opened subsequently only of those parties selected by the employers, as having necessary qualification, suitability to perform the contract satisfactorily. Tender documents for technical bid along with "Price Bid" shall be available online to Contractors / Firms. Contractors Registered in **"Class-AA" and special category Bridge-I** in Gujarat State, or the Highest Class of Registration to undertake ROAD work of unlimited amount in respect of other State with the State Public Works Department having turnover more than the estimated cost for the individual contract in any one year of the last five financial year or the Firm/Joint Ventures. The Firms having registration of other states authorities must get themselves registered in special Cat (Road) class with the (R&B) Department Government of Gujarat before opening of the Price bid. If this is not done before opening of the Price bid their tender will not be considered. In this regard, the decision of the Superintending Engineer, Ahmedabad (R & B) circle, Ahmedabad will be final. No claim on this account will be entertained.

Climate

(A) TEMPERATURE

The project road lies in the State of Gujarat. This state is situated in western part of India and has semi arid climate. Refer Index. Map. Large part of the state lies between 35⁰ C and isotherms. May is the hottest month and January the coldest. The

isotherm generally run east west and the temperature increase steadily as one moves southwards.

(B) RAINFALL

Gujarat receives most of its rainfall from the south-west monsoon between June and September with maximum intensity in July and August. The monsoon arrives earlier in the south and east and last longer than in the northwest. Hence the rainfall intensity ranges from over 2400 mm in the southwest to less than 250mm in the extreme west. Some depressions and cyclones in the Arabian Sea which move across the coastal area sometimes bring rains and strong winds in the months of April to June and October to November.

The State can be divided into four different rainfall Zones:-

- (i) Areas with more than 1000mm rainfall include the district of Valsad, Navsari, Dangs, Surat and the eastern parts of Bharuch with Rajpipla Hills.
- (ii) Areas receiving rainfall between 800mm and 1000mm include Panchmahals, Surat, Kheda and part of Ahmedabad,
- (iii) Areas having rainfall between 400mm and 800mm include Saurashtra and areas north of Ahmedabad.
- (iv) Areas receiving less than 400mm rainfall include Kachchh Banaskantha and Coastal Jamnagar.

(C) HUMIDITY

The relative humidity in all parts of the State, with the exception of the coastal areas, is low in the summer; the relative humidity varies from 75 and 80 percent in winter from 40 to 50 percent. The coastal areas, on the other hand, have moderately high humidity all the year round with a maximum in the summer months reaching as high as 90 percent.

(D) HYDROLOGY

Narmada river & Tapi river are the major rivers (perennial) in the south of the state which serve as the main water source.

(E) TOPOGRAPHY

Gujarat is located in western side of the India and bounded by the State of Rajasthan in the north, Madhya Pradesh in east and Maharashtra in south. It has also an international border with Pakistan on its northern length of about 360 Km. The state of Gujarat covers a total area of 195514 Sq.Km. and is situated between 20°06" to 24°42" North latitude and 68°10" to 74°24" East longitude. The state has the longest coastline in the country measuring about 1600 Km. along western part of India extending from Lakhpat in North to Daman in the south.

The state is divided into five major physiographic divisions,

- (i) The Alluvial Plains extend in North Gujarat to Bulsar in the south and westward to the little Rann and Banni area of Kachchh.
- (ii) The Eastern hilly tract lies between the altitude of 300 – 1400 m and forms a major divide.
- (iii) Uplands of Kachchh and Saurashtra consist of sandstone shale and basalt rock with elevations of about 150-500 m sloping readily towards the coast. The Girnar hill forest is at an elevation 1117 m.

Soil Characteristics

The soils of Gujarat state can be classified into Black Cotton Soils. Alluvial Soils, Saline Alkaline Soils and Desert Soils.

a) Black Soils :- The black soils are either medium black or deep black

i) Medium Black Soil: - Medium black soils are found in Saurashtra some parts of Sabarkantha and Panchmahal district, south west of Ahmedabad and parts of Surat and Kachchh district. This soil type is not so deep. Soil textures clay loam to clayey.

(ii) Deep Black Soil:-

The deep black soils are found in the district of Surat, Bharuch, Surat, Navsari and Valsad. Soil depth varies from less than one meter to as deep as six meters. These soils have very heavy clay content.

(b) Alluvial Soils:-

These soils in Gujarat are formed due to silting by Indus river system. These soils occur through Banaskantha district and the greater part of Mehsana and Sabarkantha. Ahmedabad, Kheda district. Further more alluvial soils also occur in the northern part of state along the sea coast except in Bharuch, Surat and Valsad district.

(c) Saline - Alkaline Soils :-

This soils are found in "Bhal Tract" of Bhavnagar, Ahmedabad and Kheda district and also in southern part of state along the sea coast except in Bharuch, Surat and Valsad district. Saline soil is also found in portions Kachchh. Mehsana and Banaskantha district due to less rain fall and high evaporation.

(d) Desert Soils:-

These are mainly found in Rann of Kachchh (Northern and north – eastern parts).

(e) Earthquake Zone:-

The District of Kachchh comes under the Zone-5 of the earth quake where as district of Saurashtra comes under Zone-3 & Zone-4. The part of Surat district comes under Zone-3 where as other district of Gujarat also comes under Zone-3. Since the district of Kachchh and some district of Saurashtra, part of Bharuch district comes under Earth quake Zones of moderate intensity, necessary precautions are to be taken for the construction works.
