

CAMC will be paid adjusting the same to inflation based on WPI. By way of example:

Payable CAMC charges for 1st year of CAMC (3rd year of supply i.e. after completion of warranty period) = $0.04 \times \text{Basic Rate} \times (\text{WPI of 3}^{\text{rd}} \text{ year} / \text{WPI of PO year})$

Note: Reference value of WPI will be taken from WPI of April of the subject year.

Example Calculation:

Assume that PO has been issued in August 2026 and supply has been made in May 2027:

CAMC charges for 1st year of CAMC =
 $0.04 \times \text{Basic Rate of PO} \times (\text{WPI of April 2029} / \text{WPI of April 2026})$
